

```
fn main() {  
    // Setting variables  
    let number = 10;  
    let name = "Alice";  
  
    // Print statement  
    println!("Hello, {}!", name);  
  
    // If-else if-else statement  
    if number < 5 {  
        println!("The number is less than 5.");  
    } else if number == 10 {  
        println!("The number is exactly 10.");  
    } else {  
        println!("The number is greater than 5 but not 10.");  
    }  
  
    // Match statement  
    match number {  
        1 => println!("The number is one."),  
        5 => println!("The number is five."),  
        10 => println!("The number is ten."),  
        _ => println!("The number is something else."),  
    }  
  
    // Loop (Simple loop with a condition)  
    let mut counter = 0;  
    loop {  
        counter += 1;  
        if counter == 5 {  
            println!("Counter reached 5, exiting loop.");  
            break;  
        }  
    }  
}
```
